WHO WE ARE

Treelab is a pioneering manufacturer of next-generation building materials, dedicated to revolutionizing the construction and furniture industries. Headquartered in Haryana, Treelab has established itself as a leader in the Quality & production of WPC (Wood Plastic Composite), PVC, MDF, and HDF products.

With a strong emphasis on innovation, sustainability, and quality, Treelab's extensive product range is designed to provide unparalleled durability, aesthetic appeal, and functionality. From outdoor decking and fencing to indoor furniture and décor, Treelab's products are engineered to meet the evolving needs of architects, builders, designers, and homeowners.

At Treelab, we're driven by a passion for excellence, customer satisfaction, and environmental responsibility. Our state-of-the-art manufacturing facilities, rigorous quality control measures, and commitment to sustainability ensure that our products not only enhance the built environment but also contribute to a greener future.

MISSION

At Treelab, our mission is to revolutionize the construction and furniture industries by providing sustainable, high-quality, and innovative building materials. We are committed to delivering superior WPC, PVC, MDF, and HDF products that enhance durability, aesthetics, and environmental responsibility. Through continuous research, cutting-edge technology, and customer-centric solutions, we strive to set new benchmarks in quality and performance.

VISION

To be the most trusted and innovative brand in next-generation building materials, driving the future of eco-friendly and high-performance solutions for homes and commercial spaces. We aim to expand our presence globally while maintaining a strong commitment to sustainability, technological advancement, and customer satisfaction.

VALUES

At Treelab, we believe in delivering excellence through quality, innovation, and sustainability. Our commitment to producing top-tier building materials is driven by a passion for technological advancement and precision. We prioritize eco-friendly solutions, ensuring our products contribute to a greener future without compromising performance.

The logo consists of the letters "wpc" in white lowercase font on a blue rectangular background, followed by the word "BOARD" in red uppercase font on a white rectangular background. The entire logo is enclosed in a thin green border. The background of the advertisement shows a grey vertical board being splashed with water on the left and engulfed in fire on the right, with a swarm of ants at the bottom.

How it's Work

**step
01**

Research and Development (R&D)

Conduct thorough research on WPC materials, technologies, and industry trends.

Invest in R&D to develop innovative product designs, formulations, and manufacturing processes.

Collaborate with experts, engineers, and designers to create prototypes and test new ideas.

**step
02**

Material Selection

- Source high-quality raw materials for WPC production, including wood fibers, plastic resins, additives, and pigments.
- Ensure that materials meet industry standards, sustainability criteria, and performance requirements.

**step
03**

Product Design

Utilize CAD (Computer-Aided Design) software to create detailed product designs, including dimensions, structures, textures, and finishes.

Consider factors such as aesthetics, functionality, durability, ease of installation, and maintenance in the design phase.

**step
04**

Manufacturing Process:

- Implement advanced manufacturing processes for WPC production, such as extrusion, compression molding, or injection molding.

Maintain strict quality control measures throughout the manufacturing process to monitor material consistency, product dimensions, surface finish, and structural integrity.

**step
06**

Quality Testing and Certification

- Conduct rigorous quality testing on finished WPC products to evaluate properties such as strength, durability, weather resistance, colorfastness, and fire resistance.
- Obtain certifications and approvals from regulatory bodies and industry organizations to demonstrate product compliance with standards and regulations.

**step
05**

Continuous Improvement

- Establish a feedback loop with customers, distributors, and stakeholders to gather insights and suggestions for product improvements.
- Invest in continuous improvement initiatives, process optimization, and technological upgrades to enhance product quality and performance over time.
